

Dive Monitoring Sensor System

Description:

Sensus Ultra is ReefNet's third-generation dive data logging device. Building on the strengths of its predecessors, it remains the simplest, most convenient tool for collecting detailed dive log data. Simply clip Sensus Ultra to your dive equipment and it will automatically record depth and temperature profiles for all your dives.

- Free Sensus Manager Software makes reviewing your dive profiles simple and convenient
- Automatic activation at a depth of 0.9144 meters

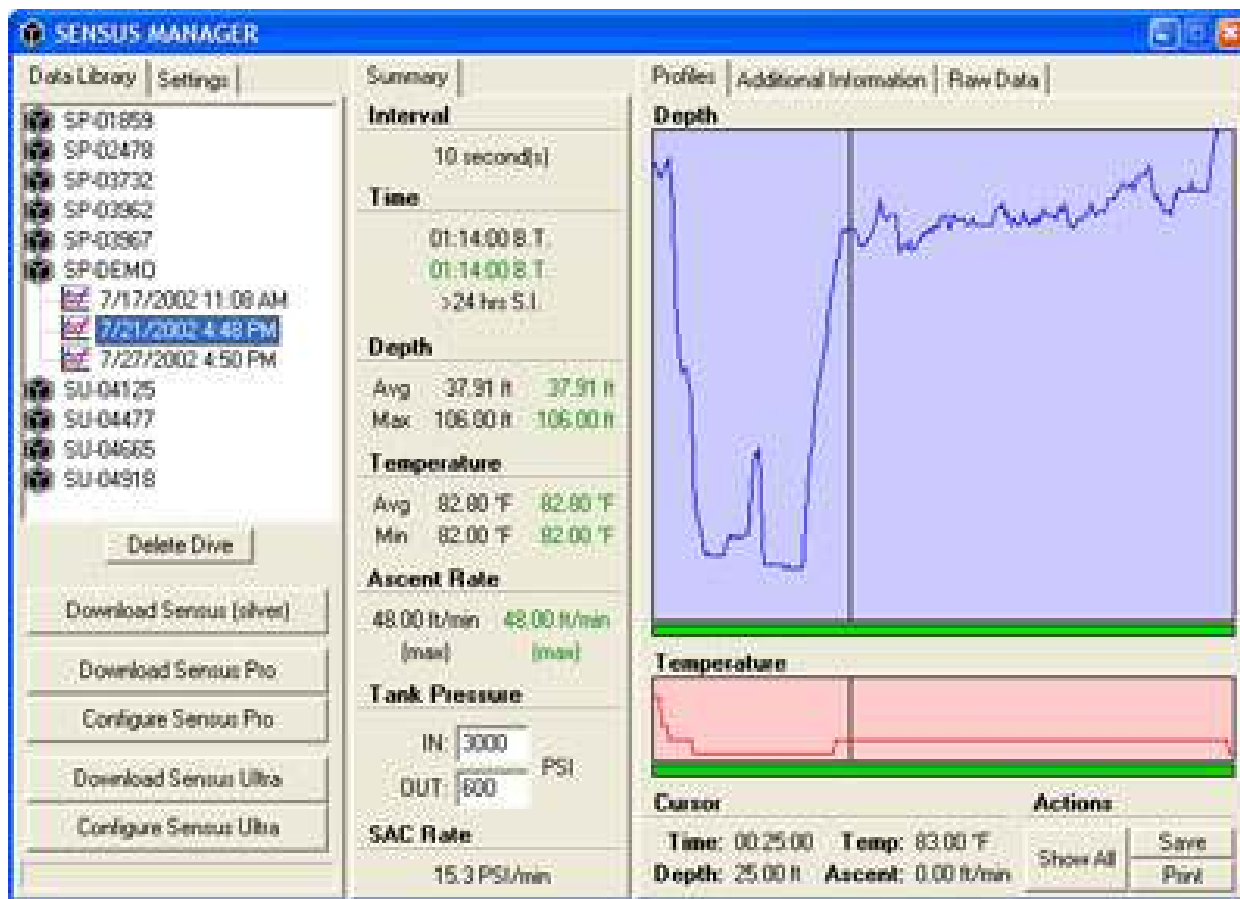

Specification:

Case Material: Glass fibre-reinforced polycarbonate
 Working Limits: Depth, 152.4 meters. Temperature, -20 °C to +40 °C
 Lifetime: Up to 10 yrs, permanent lithium cell
 Height: 25.4mm
 Width: 33.02mm
 Length: 44.45mm

Features:

- Ready to use out of the box
- Flash memory and processor capable of storing 1500 hours of dive data with a 10 second sampling interval

Order Detail:
