Available in a choice of five different frequencies, the 390 SERIES transducer is intended for vertical depth sounding applications.

The frequencies selected for the 390 SERIES are compatible with a wide range of echo-sounder types, in particular the 210 kHz version is an exact equivalent for the Atlas SW 6014.

The 390 SERIES are manufactured using the latest NEPTCAST® polyurethane moulding system. This technique provides a mechanically robust, corrosion free transducer, suitable for tank, thru-hull or over-side mounting.
